PROFESSIONAL SUMMARY

Associate Software Engineer with 1.9+ years of experience building scalable distributed systems, enterprise API integrations, and production AI workflows. Skilled in collaborating across distributed global teams, leading code reviews, and delivering solutions that reduce manual effort by 60–70%.

EXPERIENCE

Associate Software Engineer | [Aptean](#) | Coimbatore, India

Sep 2024 – Present

- Collaborated with leads and architects to define solution designs, data flow specifications, and API integration standards for 10+ carrier APIs (incl. FedEx) across a logistics platform serving 50K+ daily requests.
- Architected and shipped a production RAG system using Azure OpenAI and pgvector (PostgreSQL) with semantic vector search, enabling context-aware carrier documentation queries and reducing engineer lookup time by 60%.
- Engineered multi-agent AI workflows (Azure OpenAI) with Chain-of-Thought and Few-Shot prompt engineering; agents parse specs, generate mapping configs, and trigger validation, cutting manual carrier onboarding effort by 70%.
- Built metadata-driven carrier mapping workflows eliminating 40 hrs/month of manual configuration and enabling non-engineers to onboard carriers without code changes.
- Drove code reviews across a 10+ member team and enforced development best practices, ensuring delivery continuity and consistent quality standards.
- Facilitated cross-functional collaboration across geographically distributed teams (India & China) in an Agile one-product model; coordinated sprint ceremonies and feature delivery across time zones.
- Owned software demo content and delivered sprint review sessions to leads, stakeholders, and business owners; articulated technical progress and capability showcases to non-technical audiences.
- Tested and validated 10+ carrier APIs end-to-end using Postman; created collections and automated request flows for regression and integration testing.
- Managed database workflows using PostgreSQL and SQL Server; schema design, query optimization, and data pipelines at scale. Resolved 20+ production issues across Java, .NET Core, Node.js, and React.
- Developed Java-based backend services for carrier integration using OOP design patterns and multithreading for concurrent request handling. Optimized React frontend via code-splitting improving Time-to-Interactive by 40%.
- Guided junior developers, authored design documentation, and ensured knowledge and practice transfer across development teams.

PROJECTS

LinkedIn Content Agent | *Node.js, Python, Gemini API, Multi-Agent AI, Prompt Engineering, React*

- Built a full-stack AI automation platform using a 3-agent pipeline (Planner, Writer, Reviewer) orchestrated with Gemini API, applying Chain-of-Thought prompting to transform a single topic into a publish-ready LinkedIn post.
- Integrated LinkedIn OAuth 2.0 and publishing API; crafted a React frontend with live agent-reasoning traces and approval gates, giving users full visibility and control over AI-generated output.
- Wrote integration tests to validate agent pipeline outputs and API response contracts.

JobNest – Microservices Job Portal | *React, Spring Boot (Java), MySQL, Redux, JWT, RESTful APIs*

- Engineered a scalable job portal with Spring Boot microservices (auth, jobs, applications) secured with JWT and RBAC; designed a normalized MySQL schema with indexed queries reducing search latency by 35%.
- Built a responsive React + Redux frontend with role-based views for job seekers and employers, consuming RESTful APIs across independently deployable microservices.
- Tested RESTful APIs using Postman; validated JWT auth flows, RBAC rules, and microservice interactions across all endpoints.

DocReady — Document Analysis & Migration Readiness Tool | *Python, Google Gemini AI, React, REST API, .docx/.pdf Parsing*

- Built a full-stack tool that analyzes .docx and .pdf documents to evaluate migration readiness for knowledge-base platforms; extracts structural metrics and evaluates readability using Google Gemini AI.
- Engineered an LLM-powered verdict engine producing structured readiness scores (READY, READY WITH MINOR CHANGES, NEEDS RESTRUCTURING, NOT READY) with actionable strengths, issues, and improvement suggestions per document.
- Validated LLM verdict outputs against test documents; performed functional testing across document types (.docx, .pdf).

TECHNICAL SKILLS

AI / LLM: Azure OpenAI, OpenAI API, RAG Systems, Multi-Agent AI, Prompt Engineering (Chain-of-Thought, Few-Shot), Embeddings, pgvector, Vector Search

Languages: Python, Java, JavaScript, TypeScript, SQL, C# **Frontend:** React.js, Redux, HTML5, CSS3

Backend: Node.js, Spring Boot, .NET Core, Express.js, RESTful APIs, Microservices, WebSocket

Cloud & DB: AWS (Lambda, S3, API Gateway, CloudWatch, RDS), Docker, PostgreSQL, SQL Server, MySQL

Testing: Postman (API & Regression Testing), Integration Testing, Functional Testing

Concepts: System Design, Distributed Systems, OOP, Design Patterns, Multithreading, DSA, JWT, OAuth, Agile, Git

EDUCATION

B.Tech in Information Technology | Sri Krishna College of Engineering and Technology, Coimbatore

Dec 2021 – May 2025

CGPA: 7.75/10 | Coursework: DSA, OS, DBMS, OOP, Cloud Computing

ACHIEVEMENTS & CERTIFICATIONS

- Smart India Hackathon 2023: Qualified internal round, outperforming 150+ teams. LeetCode: 400+ problems solved across DSA and system design.
- Certifications: AWS Academy Cloud Foundations, Red Hat OpenShift, Oracle Java SE 8, Coursera Python, Udemy React & Redux
