Experience

Aptean

Sep 2024 – Present

Associate Software Developer

Coimbatore, India

- Spearheaded development of a **microservice** handling all carrier API request/response orchestration across the logistics platform, serving **50K+ daily requests**; defined the system design, data flow, and integration contracts for **15+ carriers**.
- Architected and shipped a **RAG system** using **Azure OpenAI** and **pgvector** (PostgreSQL) to semantically query carrier documentation and feature specs, enabling instant context-aware answers and reducing engineer lookup time by **~60%**.
- Designed **Multi-Agent AI workflows** (Azure OpenAI) automating internal carrier integration tasks — agents parse specs, generate mapping configs, and trigger validation — cutting manual integration effort by **~70%** per onboarding.
- Led the design and rollout of a **metadata-driven carrier mapping system**, eliminating **~40 hrs/month** of manual configuration and empowering non-engineers to onboard new carriers without code changes.
- Owned full-lifecycle delivery of **serverless carrier integrations** on **AWS Lambda (Node.js)** with auto-scaling across regions; optimized **React** frontend (code-splitting, memoization, lazy loading) improving Time-to-Interactive by **40%**.
- Delivered production features and resolved **20+ customer-reported issues** across **.NET Core, Node.js**, and **React**; authored design docs, mentored new engineers, and established reusable patterns across the **10+ engineer** team.

Projects

LinkedIn Content Agent · *Node.js, Gemini API, LinkedIn API, Multi-Agent AI, React*

- Developed a **full-stack AI content automation platform** that transforms a single topic prompt into a publish-ready LinkedIn post using a **3-agent pipeline** (Planner → Writer → Reviewer) orchestrated with **Gemini API**.
- Integrated **LinkedIn OAuth 2.0** and direct publishing via the **LinkedIn official API**, eliminating manual copy-paste and maintaining posting consistency.
- Crafted a **React** frontend showing live agent-reasoning traces and post-quality scores, with approval gates before publishing — giving the user full control over AI output.

JobNest – Microservices Job Portal · *React, Spring Boot, MySQL, Redux, JWT*

- Engineered a **scalable job portal** with **Spring Boot microservices** (auth, jobs, applications) in **Java** and **React + Redux**; secured with **JWT authentication** and **role-based access control (RBAC)**.
- Modeled a **normalized MySQL schema** with indexed queries, reducing average search latency by **~35%** across filters on title, location, and experience.

Secure Document Storage on Blockchain · *React, ASP.NET Core, AES-256, IPFS, Solidity, WebSocket*

- Developed an **end-to-end encrypted document storage system** combining **AES-256** encryption, **IPFS** decentralized storage, and **on-chain hash verification** via **Solidity smart contracts**.
- Constructed an **ASP.NET Core** backend for encryption orchestration, IPFS pinning, and real-time upload status streaming via **WebSocket** — enabling **tamper-proof audit trails** for e-invoices.

Education

Sri Krishna College of Engineering and Technology

Dec 2021 – May 2025

Bachelor of Technology in Information Technology · **CGPA:** 7.75/10.00 · **Coursework:** DSA, OS, DBMS, OOP, Cloud

Coimbatore, TN

Technical Skills

Languages & Frontend: Java, Python, JavaScript, SQL, C#, Solidity, React.js, Redux, HTML5, CSS3

Backend: .NET Core, ASP.NET Core, Node.js, Express.js, Spring Boot, REST APIs, Microservices, API Development, WebSocket

AI / LLM: Azure OpenAI, RAG, Multi-Agent AI, pgvector, Embeddings, Prompt Engineering

Cloud & DB: AWS (Lambda, S3, API Gateway, CloudWatch, ALB, RDS), Azure OpenAI Service, Docker, PostgreSQL, SQL Server, MySQL

Concepts: System Design, Full-Stack Development, Scalable & Distributed Systems, Object-Oriented Design, Multithreading & Concurrency, Performance Optimization, Data Structures, Algorithms, OOPs Concepts, Design Patterns, SDLC, Agile Methodologies, Production Support, JWT & OAuth, Git

Achievements and Certifications

- **Smart India Hackathon 2023** — Qualified internal college round, outperforming 150+ teams with a system design solution.
- **LeetCode:** Solved **400+ problems** focused on data structures, algorithms, and system design patterns.
- **AWS Academy Cloud Foundations** · **Red Hat OpenShift Applications** — Cloud architecture and containerized deployment on OpenShift.
- **Additional:** [Oracle Java SE 8](#) · [Coursera Python](#) · [Udemy React & Redux](#).
